

NUCLEAR MANIFESTO

JOBS. PROSPERITY. POWER.

Nuclear energy gives us reliable power for our homes, businesses and public services, and ensures our energy security. It also provides clean energy to save our planet. It gives people good, long term jobs and opportunities to build lives and families on a firm foundation.

Nuclear energy is the bedrock of communities across the country and a powerful engine of economic growth. The UK should use a major nuclear construction programme to increase our nuclear skills base and rebuild and sustain strategic industrial capabilities. Alongside renewables, nuclear can propel us to a secure, sustainable and prosperous future.

That is why in Parliament, I will support:

1

Progressing Sizewell C to a Final Investment Decision by autumn 2024 and extending the life of our current power stations.

2

Building a fleet of Small Modular Reactors (SMRs) across the country and a third large-scale station at Wylfa on Anglesey to help rebuild industrial Britain.

3

Making the UK the best place to develop and deploy advanced nuclear reactors.

4

Maximising the UK's fuel manufacturing capability to meet increased demand from allies for current and advanced nuclear fuels.

5

Selecting a suitable site in a supportive and willing community for a Geological Disposal Facility, a long-term solution for waste.

The nuclear reactors we build today will last for the rest of this century. They will provide our country with long-term security and opportunity for our children and grandchildren and generations yet to come, and the time to act is now.
